

17-356/17-766: Software Engineering for Startups

Homework 4, Sprint 2 Extension

100 points (original) + 20 points (new reflection)

NEW DEADLINE: March 6th, 11:59 pm (one week)

This homework is to be done with your group.

Good news! Your meeting with potential investors, wherein you are planning to present your MVP, has been moved by a week!

That is: you have an additional week to complete the deliverables, including the MVP, for Homework 4.

The assignment has remained *generally* unchanged from the original Homework 4, with a new deadline. The one *new* deliverable is as follows:

- **A short (approximately 1 page) writeup, answering:** What did you choose to do with the extra time, why, and how will this influence your process moving forward? That is, did you implement new features? Spend time on old features? Why these new features (if the former), or why did you need the extra time (if the latter)? Will you change anything about your time estimates, future backlog/new feature to implement, or anything else about your process, based on your experience in this sprint, given the extra time?

This additional writeup will be worth 20 additional points (on top of the 100 points the original homework assignment is worth).

Submit this writeup with the original assigned writeup, along with your walkthrough, to Canvas; continue pushing code for your MVP to GitHub.
